

Document title	Risk Assessment Methodology
Document ID	SLP-ISMS-005
Version	1.0
Classification	Internal
Owner	ISMS Manager
Approved by	Peter Kováč, Managing Director
Date	6 February 2026

DISCLAIMER: SLOVPACK s.r.o. is a fictional company created for portfolio purposes. All data, names and scenarios are invented.

1. Approach — SLOVPACK applies an asset-based risk assessment. Risks are identified by analysing threats and vulnerabilities affecting assets in the Asset Register (SLP-ISMS-006), using evidence gathered through interviews, document review and site walkthroughs. Assessment is repeated at least annually and after significant change. **2. Likelihood scale (1–5):** 1 Rare (< once/5 yrs) · 2 Unlikely (once/2–5 yrs) · 3 Possible (once/1–2 yrs) · 4 Likely (several times/yr) · 5 Almost certain (monthly+). **3. Impact scale (1–5):** 1 Negligible (no disruption, < €1k) · 2 Minor (< 4 h disruption, < €10k) · 3 Moderate (≤ 1 day, confidential data affected, < €50k) · 4 Major (multi-day disruption or personal-data breach requiring notification, < €250k) · 5 Severe (prolonged production halt, loss of a major customer, ≥ €250k). **4. Risk level:** score = Likelihood × Impact. 1–5 Low · 6–11 Medium · 12–19 High · 20–25 Critical. **5. Acceptance criteria:** score ≥ 12 must be treated. Medium treated where cost-effective, otherwise acceptable by the ISMS Manager; any acceptance of High/Critical requires written approval by the Managing Director. (Aligned with the MD's €2,000 budget-approval threshold: treatments above it are presented with cost estimates.) **6. Treatment options:** Modify, Retain, Avoid, Share.
